🏫 TECNOLÓGICO NACIONAL DE MÉXICO

🎓 Computer Stystems Engineer

📅 Graduated in 2017

🇲🇽 Native Spanish

🇺🇸 **B2** English

🇯🇵 Basic Japanese

MICHEL R. BRACAMONTES

EXPERIENCE DETAILS

Android developer

2016-2018

I was in charge of developing and deploying Android applications with Java and Firebase; including a messaging application similar to WhatsApp and an alert and location application through SMS messages. I also developed a video game with GameMaker: Studio, PHP and MySQL aimed at learning the binary system with two game modes, including a Tetris-style game mode, with user authentication and online score saving.

Full Stack developer

2018-now

I have developed and deployed a large number of websites. My favorite examples are a corporate website for a construction company created with vanilla JavaScript, Sass, Gulp and PHP, with a manually implemented image slider and consumption of REST API; a fan website built with Spring Boot, Angular, MongoDB and Reactive Streams, including a comments section, user management and a content management panel; and my own web portfolio made with Vite, React and TypeScript with custom ESLint rules, email sending with EmailJS and three elements created from scratch: dialog boxes, an image slider and a content slider, which are reusable, configurable and they adapt to any device.

AutoHotkey programmer

2018-now

I have worked as a freelance AutoHotkey programmer for clients from different countries. I have surpassed all the competition, which has positioned me as the best AutoHotkey programmer in (at least) all of Latin America. This has allowed me to have a loyal customer base who to this day continue to contact me directly, allocating only part of my free time to it. The projects that are no longer open on my Freelancer.com profile and their reviews support this statement.
